

Sage 100 Advanced Version 2024 Supported Platform Matrix

Created as of March 28, 2024

The information in this document applies to Sage 100 Advanced Version 2024. Detailed product update information and support policies can be found in the Sage Knowledgebase at: <https://us-kb.sage.com>. This document is intended to cover information regarding the compatibility of various operating systems with Sage 100 Advanced as of March 28, 2024. Any operating system not listed should be considered *incompatible*.

Note: It is critical that before and during an installation, this document is thoroughly reviewed, along with the *Sage 100 Installation and System Administrator's Guide* and other documents found in the article "[How to install Sage 100 and locate installation and upgrade information](#)".

If you have custom code modifications to your Sage 100 Advanced software, contact your Sage Business partner and/or the third-party software vendor before installing Sage 100 Advanced.

For information regarding third party software see article [Integrated Solutions Compatibility Matrix](#)

For supported version see article "[Sage 100 Supported Versions](#)"

A number of Sage 100 features or integrations require internet access and **TLS 1.2. Sage 100 Servers and Clients need to have TLS 1.2 enabled**. Some of the more common features or integrations are (not a complete list):

Paya Connect Desktop - Credit Card Processing - Sage Payments

Office 365 Connector for Sage 100

Sage Advisor Update

Sage Intelligence

Sage 100 Payroll 2.0 (Payroll Tax) / Sage Data Cloud

Sage Federal and State Tax Reporting (Aatrix)

Sage Sales Tax (Avalara)

Paperless Office (email)

Direct Deposit Service

G/L Integration

Sage Banking Cloud

eBusiness Manager

Sage 100 Web Services

Sage Partner Cloud

Sage 100 Advanced Version 2024 Supported Platform Matrix

Created as of March 28, 2024

Supported Workstations	Remarks
Windows 11 Pro and Enterprise Windows 10 (32 and 64-bit) Pro and Enterprise	<ul style="list-style-type: none">• Windows 11 Pro and Enterprise are not recommended for Sage 100 2024 32-bit, due to unresolved issues in the Microsoft Print Server. Sage 100 2024 64-bit is recommended for Windows 11 operating systems.• .NET Framework 4.8 is required. During installation if it is not detected, users will be prompted to install. A REBOOT is required. Refer to https://docs.microsoft.com/en-us/dotnet/framework/get-started/system-requirements for .NET Framework system requirements

Sage 100 Advanced Version 2024 Supported Platform Matrix

Created as of March 28, 2024

Microsoft Dedicated Servers defined as Operating System software specifically designed to be used as a network server (not peer-to-peer)	
Supported Servers	Remarks
<p>Windows Server 2022 Standard and Datacenter</p> <p>Windows Server 2019 Standard and Datacenter</p> <p>Windows Server 2016 Standard</p>	<p>Notes</p> <ul style="list-style-type: none"> ▪ If eBusiness Manager is installed, the ISAPI Plug-in must be installed manually for new Sage 100 installations. ▪ The eBusiness Web Services service can be installed only on a Windows Server platform. For more information, see the <i>eBusiness Web Services Installation Guide</i> Webservices.pdf found by clicking the Documentations directory on the Sage 100 Advanced Autorun window of the install DVD. Running the Web Engine as a Service is <i>not recommended</i> at this time due to issues involving Credit Card Processing. See Knowledgebase articles "Error: 65 AR CreditCardCommon.pvc 1935" and "How to run Web Engine as an Application" for more information. ▪ .NET Framework 4.8 is required. During installation if it is not detected, users will be prompted to install. A REBOOT is required. Refer to https://docs.microsoft.com/en-us/dotnet/framework/get-started/system-requirements for .NET Framework system requirements. <p>Recommendations</p> <ul style="list-style-type: none"> ▪ Sage 100 Advanced should be installed on a dedicated member/application server. Although supported, certain Windows server configurations are not recommended due to possible instability and performance issues. Support from Sage Customer Support may be limited in the following circumstances: <ul style="list-style-type: none"> ○ Running Sage 100 Advanced on a Windows server acting as an Active Directory domain controller managing a large number of user accounts, computer accounts, group policies, organizational units, remote sites, or other network resources. ○ Running Sage 100 Advanced on any server actively running other applications or services, such as e-mail (for example, Exchange Server), IIS, fax programs, SQL Server, or other software. <p>Not Supported</p> <p>The items listed here are intended to be used for clarification purposes only and are not intended to represent a comprehensive list of exclusions.</p> <ul style="list-style-type: none"> ▪ Running Sage 100 Advanced on any Windows Small Business Server operating system – regardless of the number of user and computer accounts it is managing, is not supported. Small Business Server runs Active Directory and Exchange Server by default, and that has been a factor in reported cases of instability and performance issues. Instability may also result if Small Business Server is further configured to run other applications concurrently, such as IIS, Shared Fax Services, and SQL Server. ▪ Using a server operating system as a Sage 100 Advanced workstation is not supported (not even as a client to another server). However, this configuration can be utilized for testing. ▪

SageCRM Supported Server	Remarks
--------------------------	---------

Sage 100 Advanced Version 2024 Supported Platform Matrix

Created as of March 28, 2024

Virtual Platforms

Notes

- Sage 100 is currently supported on virtual environments where the Virtual Vendor supports the Windows OS that Sage 100 supports.
- All supported Operating Systems listed under the Supported Workstations, Sage 100 Supported Servers and Sage CRM Supported Servers sections are supported when hosted on these Citrix virtual platform products.
- Hardware and software requirements (minimum and recommended) for Sage 100 products apply to virtual environments as well.
- Some third party products might not support the same virtualization platforms as Sage 100 products. For verification, please check with the third party vendor.

Miscellaneous Notes

1. When running Sage 100 Advanced over a local area network (LAN) environment, the ping timings will vary depending on the speed and configuration of the network. Typical ping timings with 1,800 bytes of data should be 20–30 milliseconds or faster. Unacceptable ping speeds are over 40 milliseconds.
2. In the Sage 100 Advanced client/server environment, integrated applications do their processing at the workstation, not at the server. As a result, users may experience performance issues when running integrated applications from remote locations. Some of the applications affected include Crystal Reports.
Sage 100 Advanced includes a client/server-based ODBC driver. This can be used instead of the client ODBC driver for faster processing.
3. Virtual private network (VPN) and wide area network (WAN) connections should be set up as point-to-point connections, as opposed to Internet connections, for better stability and performance. If an Internet connection is used, ensure the Internet Service Provider (ISP) can provide a guaranteed bandwidth; otherwise, users may experience dropped sessions and lost connections. With any type of low speed WAN connection, for each remote user, select the Low Speed Connection checkbox in User Maintenance.
4. If a VPN connection is used, keep in mind the following:
 - VPN solutions are either software-based, hardware-based (such as a VPN firewall), or a hybrid of both.
 - If a hardware-based solution is used on Level 3.x, verify that it supports secure, encrypted connections for applications that use back channels.
 - Software-based VPNs result in slower connection speeds due to the security overhead of encrypting the data. Hardware-based solutions run faster.
 - Low-speed connections are subject to considerable performance issues when using a software-based VPN. It may cause the connection to have a bandwidth of less than 128 Kbps. For information on guaranteed bandwidth requirements, see miscellaneous note above.
 - Printing or previewing Crystal Reports and forms will require the Client Server driver (see miscellaneous note 3), or a Terminal Server or Citrix connection.
5. Suggestions for faster remote printing of Crystal reports over a WAN and virtual private network (VPN) are:
 - Using the Sage 100 Advanced Client/Server ODBC driver provided with Sage 100

Using Citrix or Remote Desktop Services

6. Always run Workstation Setup after installing, re-installing, or upgrading the Windows operating system, and verify that the Windows printers in Control Panel > Printers are still operational. Sage 100 Workstation Setup requires administrative rights.

Sage 100 Advanced Version 2024 Supported Platform Matrix

Created as of March 28, 2024

7. Verify that all hardware involved in running Sage 100 Advanced is on your operating system vendor's Hardware Compatibility List. Incompatible hardware can cause severe data corruption. For more information, refer to the Microsoft Hardware Compatibility List at: <https://partner.microsoft.com/en-us/dashboard/hardware/search/cpl>
8. The eBusiness Manager module may have additional separate program fixes for the Web Engine. Latest program updates can be accessed [Sage 100: Download Portal](https://us-kb.sage.com) at: <https://us-kb.sage.com>
9. If third-party enhancements are installed, always contact your development partner to verify compatibility before installing any updates. Also note that some program fixes are specifically excluded from the program fix collection and should be installed only if you are experiencing the problem they address.
10. The eBusiness Web Services service can be installed only on a Windows Server platform. For more information, see the *eBusiness Web Services Installation Guide* found by clicking the Documentation link of the Sage 100 Advanced Autorun window.
11. Always validate compatibility of development partner enhancements before upgrading.
12. Sage is committed to supporting future Microsoft operating systems as they are released to market for all Sage 100 Advanced modules; however, Sage does not support beta-level operating systems. As new operating system levels are scheduled for general release, Sage will verify their compatibility, and this document will be updated when Sage's evaluations are completed.
13. Sage requires a guaranteed minimum bandwidth of 128 Kbps per user for running Sage 100 Advanced through a low speed remote connection. For each user, 256k or higher is recommended. Select the Low Speed Connection check box in the Sage 100 Advanced User Maintenance task.
14. TCP/IP must be installed and properly configured so that you can ping by computer name and IP address from the workstation to the server. The server must be able to ping the workstation by IP address. You must be able to use the Windows TELNET.EXE utility or equivalent to communicate with the Application Server on a specific port ID and IP address, or on a specific port ID and name from all workstations to the server. If this cannot be done, you must contact your Microsoft support organization. Sage Customer Support cannot assist with this task. For more information on connection requirements, refer to your *Sage 100 Installation and System Administrator's Guide*.
15. The Sage 100 Advanced Application Server is a Windows Sockets application that listens on a single port (default port 10000). You must open this port on your firewall/router so clients can properly connect to the Application Server. The client does not listen back on its own port, so opening ports for clients is not necessary. Also, the Application Server is compatible with Network Address Translation (NAT).
16. If the Sage 100 Advanced Application Server is configured to run as a service and you are experiencing "connection timed out" errors, white screens, hanging, or slow performance, but only after a certain number of Sage 100 Advance users are in the system, review article "[Cannot create a new session with a large number of users](#)" on Sage Knowledgebase at <https://us-kb.sage.com>. If you are running the Application Server on the desktop instead of running it as a service, the same problem may occur in a very large multi-user environment. If that is the case, review article "[Cannot create a new session with a large number of users](#)" on Sage Knowledgebase.
17. The Microsoft Fax Services feature provided with Windows Server are supported with Paperless Office and batch faxing. For more information, refer to the [Integrated Solutions Compatibility Matrix](#) on the Sage Knowledgebase at: <https://us-kb.sage.com>
18. Sage 100 2024 is compatible with TLS 1.2

Sage 100 Advanced Version 2024 Supported Platform Matrix

Created as of March 28, 2024

Recommended Minimum System's Hardware Configuration			
	Recommended Minimum		
Sage 100 Supported Servers	Processor	Memory (RAM)	Additional Requirements
<p>Windows Server 2022 Standard and Datacenter</p> <p>Windows Server 2019 Standard and Datacenter</p> <p>Windows Server 2016 Standard</p>	<p>For 64-bit systems: Intel or AMD 64-bit capable, such as Intel Xeon or Quad- Core AMD Opteron</p> <p>For 32-bit systems: Intel Pentium 4 class 2.4 GHz Dual processor recommended</p>	16 GB	100 Mbps network connection
Single User/Client Workstation	Processor	Physical Memory (RAM)	Available Memory (RAM) ¹
Workstation (client) operating system versions not listed in this document will not be supported.			
Windows 11 Pro and Enterprise	<p>1 gigahertz (GHz) or faster with 2 or more cores on a compatible 64-bit processor or System on a Chip (SoC)</p>	8 GB	512 MB
Windows 10 (32 and 64-bit) Pro and Enterprise	Intel Core 2 Duo	8 GB	512 MB
Network Bandwidth (for multi-user systems)	Recommended Minimum		
	100 Base-T – 100 Mbps at Full Duplex		

¹The recommended minimum is designed to ensure that the systems used for Sage 100 Advanced are capable of providing adequate performance with a standard complement of normally installed applications, such as virus protection software.

Sage 100 Advanced Version 2024

Supported Platform Matrix

Created as of March 28, 2024

¹ Regardless of the recommended minimums specified above, users should check the available memory on the workstation prior to installing Sage 100 Advanced and use the Windows Task Manager to check the Available Physical Memory on the Performance tab. A minimum of 512 MB of physical RAM should be available to Sage 100 Advanced when all other applications that will be used with Sage 100 Advanced are loaded. Sage cannot guarantee acceptable performance when running Sage 100 concurrently with other applications that consume system resources required for Sage 100 to perform at an optimum level. Refer to the article “How to determine memory” on the Sage Knowledgebase at: <https://us-kb.sage.com>
